Controlled organoids transplantation as enabler for regenerative medicine translation

©2020 CSEM

ORGANTRANS offers a disruptive alternative to donor organs for patients with chronic or end-stage liver diseases who still have residual healthy tissue by isolating autologous liver stem cells

CELL SOURCE	VASCULARIZATION ARCHITECTURE
PRODUCTION OF STANDARDIZED SPHEROIDS	3D BIOPRINTING PLATFORM
ORGANOIDS PICKING AND SORTING	PHYSIOLOGICAL MICROENVIRONMENT
POLYMERIC REGENERATIVE HYDROGEL	IN VITRO / IN VIVO TESTING
