Regenerative medicine: from new insights to new applications

ORGANTRANS

Controlled Organoids transplantation as enabler for regenerative medicine translation

Starting date of the project: 01/01/2020

Duration: 36 months

= Deliverable D9.2 = Project webpage

Due date of deliverable: 30/04/2020

Actual submission date: 30/04/2020

Responsible WP: Martina Nešverová, WP9, AMI

Responsible TL: Martina Nešverová, AMI

Revision: V0.1

Dissemination level		
PU	Public	X
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the consortium (including the Commission Services)	

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 874586.

Executive Summary

ORGANTRANS website <https://organtrans.eu/> has been set up in order to increase public awareness of ORGANTRANS project. Provisional webpage with basic information on the project (i.e. project facts, the publishable abstract, list of partners and contacts) has been operational since January 2020. The whole contents of the webpage is public and complete project information is on-line since the end of April 2020. The ORGANTRANS website will be actively maintained and updated during the whole course of the project.

1. Introduction

D9.2 *Project webpage* is the deliverable associated with task T9.1 *Dissemination and communication activities*. The objective of this task is to ensure that the results of the project will be disseminated to the European research, industrial and public communities. It ensures an on-going communication between the general public, experts in regenerative medicine, technicians etc. on one side and partners of the project on the other.

The task also describes creation of a comprehensive dedicated website for the project. This was established at the beginning of the project and set up for public access. The website will be actively maintained during the project period.

The ORGANTRANS website has been operational since January 2020 in a provisional version and from end of April 2020 in a full version.

2. ORGANTRANS website

The domain <https://organtrans.eu/> has been procured for use by project ORGANTRANS. The website has been created in Open Source software called WordPress. WordPress started as a blogging system but has evolved to be used as a full content management system that is completely customisable and can be used for almost anything within the field of web design. It allows fast and reliable customisation and has a user-friendly back-office environment which will simplify the requirement for regular updates and file uploads.

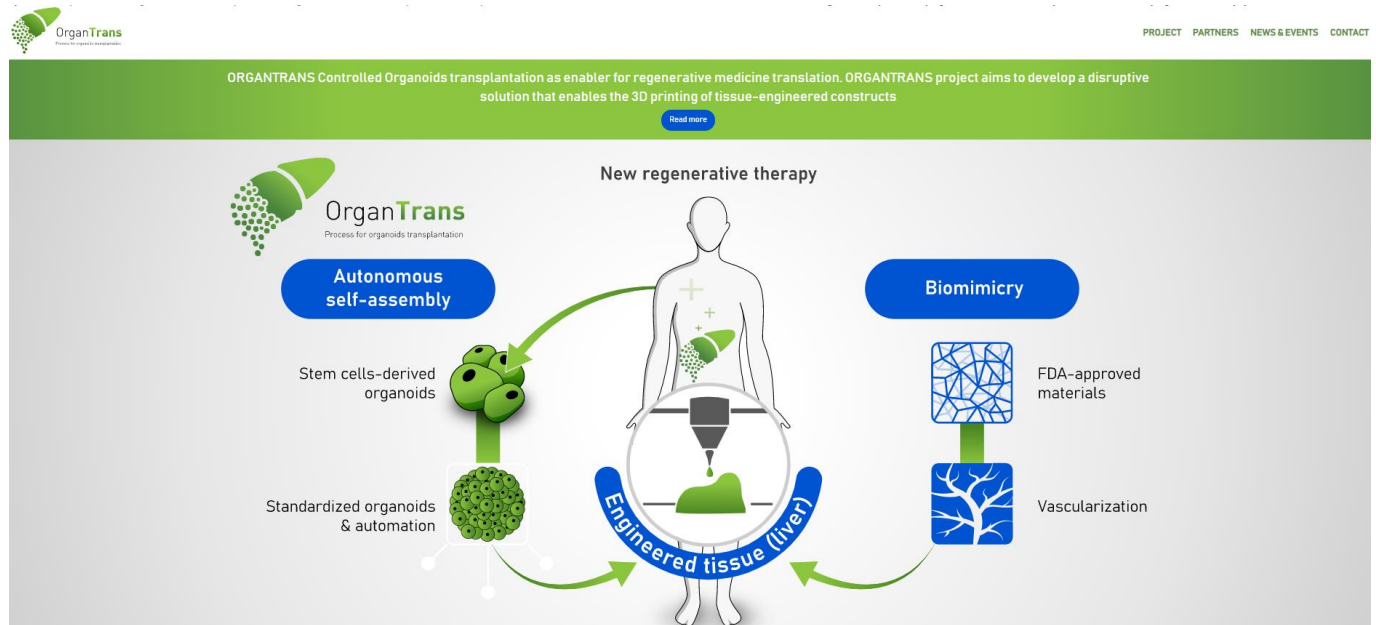

Figure 2: ORGANTRANS homepage

All individual pages of the ORGANTRANS website include a header with the project logo and a navigation menu allowing for quick access to any part of the website, as well as a footer with the acknowledgment text *"This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 874586."* and the EU flag.

The content of ORGANTRANS home page is divided in several frames:

- heading with project logo and navigation menu with titles of the pages;
- frame with project's acronym and full name;
- frame with infographic of the project concept;
- frame with information about the project (overview, objectives, competences, results);
- frame providing a link to project core team and showing pan-European dimension of the partnership (with links to description of the partners, their roles in ORGANTRANS, and key staff);
- frame with project contacts including contacts of Project Coordinator and Project Manager;
- frame introducing the news & events;
- a footnote providing acknowledgment of EU funding and an illustration of the EU flag.

The content of the individual sections of the Navigation menu is described in the following chapters.

2.1. Project

Frame *ABOUT THE PROJECT* gives an access to the key information about the project including its overview, main objectives, core competencies of project partners and results.

ORGANTRANS ABOUT THE PROJECT

Figure 3: ORGANTRANS about the project section and its subchapters

2.2. Partners

The ORGANTRANS consortium consists of 8 partners with complementary backgrounds that will help to achieve challenging goals of the project. The name of each partner incl. its logo and link to its organization description, role in ORGANTRANS description and bios of key staff is included in the *PARTNERS* frame. Moreover, the section provides a link to the project core team, their roles and contacts.

Figure 4: Partners' section

2.3. News & Events

The frame *NEWS & EVENTS* contains details of dissemination activities, press releases, publications and events as well as announcements of ORGANTRANS meetings and other initiatives able to promote the project at wide level. The section already contains news about the project kick-off meeting, first press release, participation at an event and mention in a university lecture.

NEWS & EVENTS

- ORGANTRANS kicked-off**
February 4, 2020
- First press release: ORGANTRANS Regenerative medicine breakthrough**
February 5, 2020
- Simplifying the study of organs**
February 7, 2020
- ORGANTRANS in video lecture on Regenerative Hepatology**
April 24, 2020

3. Further development of the ORGANTRANS website

Additional information will be published throughout the lifetime of the project, in particular related to *RESULTS* as the first results of ORGANTRANS technologies validation will be made available. Short video about the project and the demonstrators will also be included.

Beyond the periodic updates and publication of results two other activities need to run in parallel. Firstly, constant security checking and control is needed to protect all sensitive data uploaded onto the server of the Czech provider Active24 (<http://www.active24.cz>). This will be assured by generation of secure login details and by continuous adaptation of plugins and add-ons in order to avoid any sensitive data leakage. Special attention will be given to random search engines crawlers, which download any accessible documents and retain them for long periods in their cache system (even erased documents). This activity will last for the project duration and beyond. Secondly, further optimisation of the website will ensure its positioning among first search results for relevant keywords.

4. Conclusions

The ORGANTRANS project website <https://organtrans.eu/> meets the requirements which were set for the website in the respective task T9.1 *Dissemination and communication activities*. The project website has been set up to increase public awareness of ORGANTRANS and to disseminate the project's results. Basic information on the project can be found on the webpage as well as public deliverables and project outcomes and publications.

5. Degree of Progress

The deliverable is 100% fulfilled. The maintenance of the website will be carried out during the whole course of the project.

6. Dissemination Level

The Deliverable D9.2 is public and therefore it will be available to download on the project's website.
